

EZOCEAN New Function | Inland Routing Guide

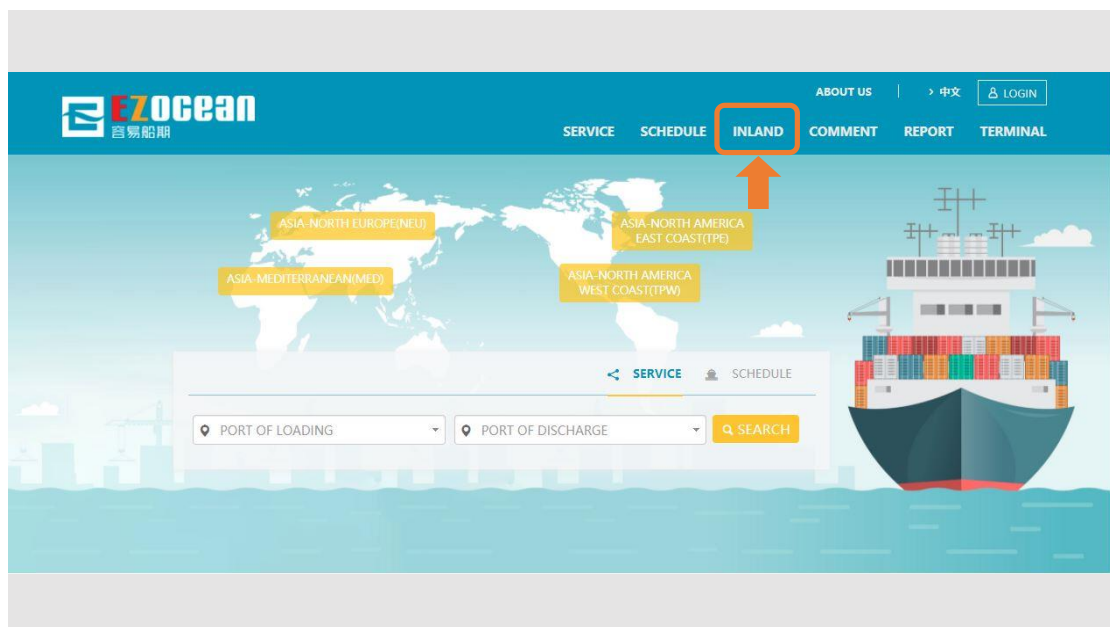

Are you always bothered by below questions?

- ✓ What is the usual port of loading for Asia inland locations?
- ✓ What is the usual port of discharge for North America inland locations?
- ✓ Can these inland locations be via Pacific Southwest or via Pacific Northwest or East Coast?
- ✓ What is the hub (port of railway station) for inland locations?
- ✓ What is the distance between hub and final destination by trucking?

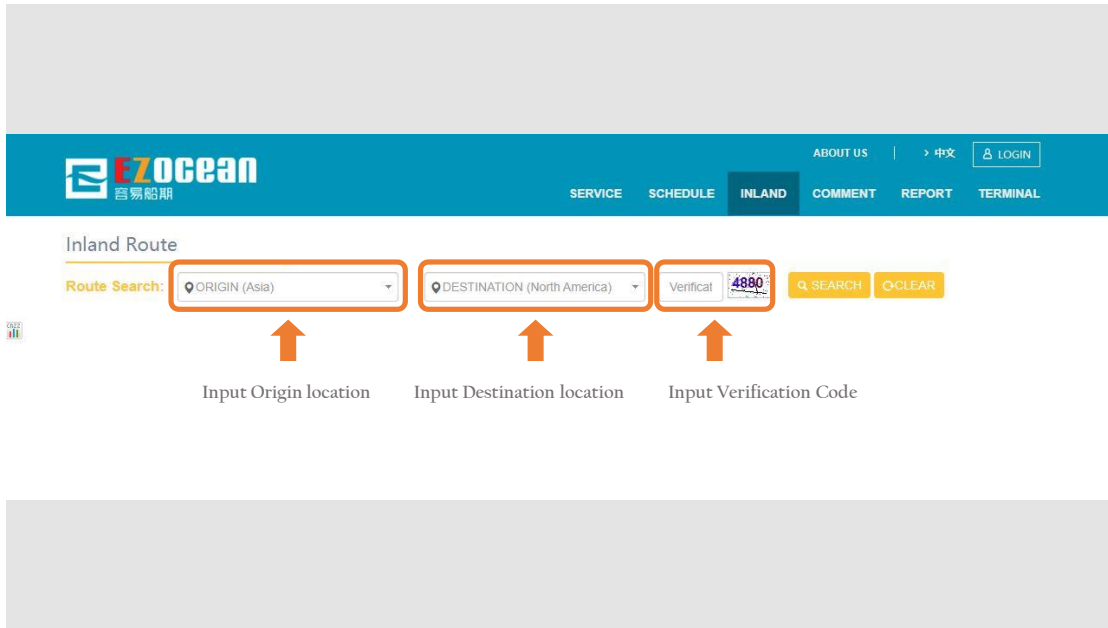

EZOCEAN Website is now launching a new function – Inland Routing Guide.

Let's explore how to use it.

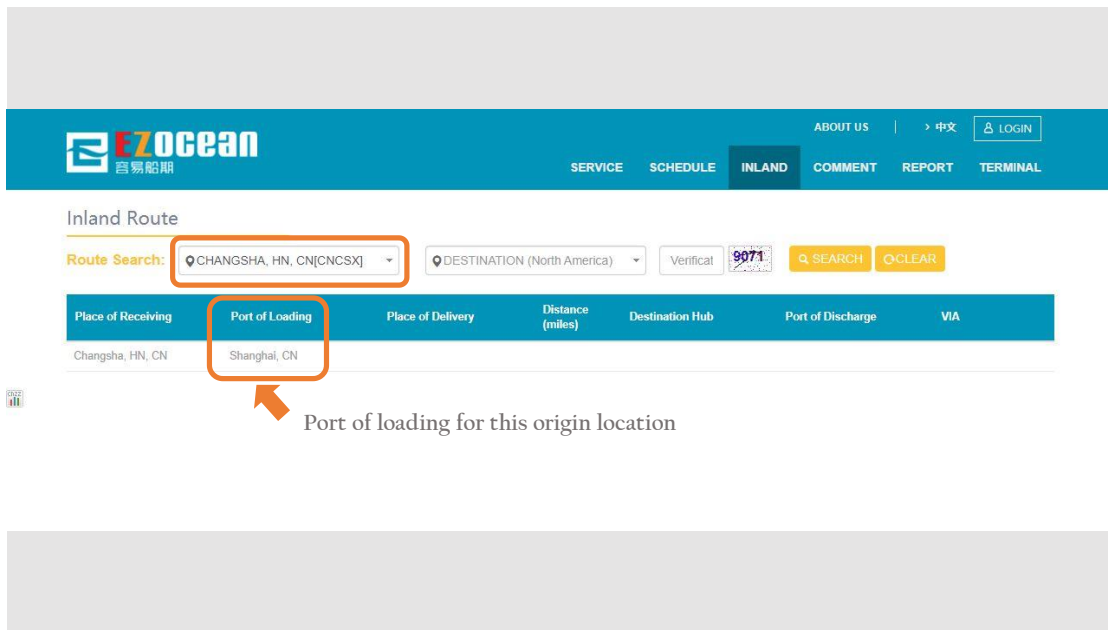

1) Open www.ezocean.com main page, click on INLAND menu.

2) Current inland guide provides routing information for Asia inland locations and North America inland locations.

3) You can search on origin location only. Result will show its port of loading.

4) You can search destination location only. Result will show its available port of discharge, hub, and trucking distance between hub and final destination. The "VIA" column shows whether it is via west coast or east coast.
